To those that actually read what I wrote and offered help or suggestions thanks. Waranto, went to the site you listed and "Malware Bouncer" is a product no longer produced, around 04 or 05. It does not list "Destroyer" (at least could not find it), it is a good site though so have bookmarked it.

I am going to contact EMCO though to see what they say about it, should have done that in the first place.

To those that were only sarcastic, get a life, just because the makers of Renguard say it is safe does not make it so. Of course they would say that, you don't think companies have your best interests at heart do you?

Until I find a solution/answer I choose not use renguard, can't afford to have a miner in my system. If EMCO says to ignore it I will, but just the same I would rather be safe than have my finacial info open to whomever.

Everyone have a good week.
