Renegade worked fine before I installed RenGuard. I've reinstalled both and tried launching each and Renegade will load.

Though I install RenGuard and I get an error trying to launch Game2.exe (directly and through RenGuard). I un-install RenGuard and I still have the same program. This is weird. What does RenGuard do to my original game.exe file besides renaming it?

"The application failed to initialize properly (0xc0000005). Click on OK to Terminate the program."

I'm running Windows XP 32-bit by the way (AMD Athlon 3200+, 1GB RAM). What can I do to fix the problem?
