Is it just me, or do a bunch of people get this error? I've asked time and again how to combat this and no one seems to know. Any ideas? It was fine up until about patch version 1.034 then it started to get worse after that. Someone suggested that it is my DSL router, but it worked fine before. Just wanted to bring it up again if anyone has any suggestions. Maybe there is a configuration in my router that I need to change. Because of this, I cannot play on any REOL server out there. WOL is down so I'm having Renegade withdrawals! Help!!!
