By the way 18 is 24 in binary if you didn't know. You may need it if your changing to 24 bit as that registry entry is going to be in binary format. Likewise 10 is 16 bit in binary.

It is pretty safe to do, the worst that you could do is probably screw up Leveledit, nothing a reinstall wouldn't fix. Well at least it isn't like my old 56K modem, On their support site it said editing the registry to mute your modem would void the warrenty. "Using any alternative ways to lower the volume of the data/voice modem can void your warrenty" and that was using the veloume control on the modem that didn't turn it off when it dialed.
