Ok I am trying to make this fuckin old computer (built in 1996) it turns on but I need a keyboard because it gives me shit about how it dosent have a keyboard... Only, its got a keyboard port... its not PS/2... or USB? It has lines almost in the hook thing? It was made before they had PS/2 and USB so what is it???

I can mabe get a picture later but my sister wont let me use her camera right now.

The hard drive isent even SETA!
