ok, an image at 1024x800 would be 150kb . (about)

times 150 by 500 = 75000Kb = 75Mb
tar.bz2 it to get it to about 25Mb
il even write a php script to upload it to my server. it would take about 15 mins (max, unless you have a really slow upload speed) to upload. so it would take 16 mins of your time. im not paying for that.
