dthdealer wrote on Thu, 11 January 2007 19:46xp can run programs under compatibility of earlier versions of windows, and i am guessing vista could do that for xp. still, doing this hogs more ram and processing power. i go for xp

Xp, in my opinion is the best windows version ever..Now, dont say "obviously, the new ones are always better"

Because, ME/2000 was the worst one of them all, i prefered 98 over it simply because of all th e internal bugs it had.....
Half of the programs wouldnt dnlwd, YES i have expeirenced this, even when done the EXACT way, it didnt work...

The Netscape i had on it, and three of my other friends at the time, would not work half of the time....these were when ME first came out....

The bugs were obviously fixed as time went on...but just goes to show you..

Until NTs bugs are out (which, obvioulsy there will be a few)
Im sticking with XP till about 2008 or so..until its proven obsolete and everything requires it then.
