Its some DNS problem thats been going on for a while now, its ghey.
For most people the site seems to work fine but for others it does not.

Also, for some people www.fan-maps.net works but www.fan-maps.com does not.
For some people fan-maps.net works but fan-maps.com does not (without
[www.](http://www.fan-maps.com))

I can only suggest for now to try all possible domains:

<http://www.fan-maps.net/?brenbot>
<http://www.fan-maps.com/?brenbot>
<http://fan-maps.net/?brenbot>
<http://fan-maps.com/?brenbot>

If none of these links work for you then there is not much we can do
right now to fix it, its a problem with the webhost and DNS etc :/
