at walls flying, the gdi power plant is vulnerable to a hidden nuke beacon, if you get an apache and fly as quickly as possible to the plant then, land on the top part and run to the end of the walkway and place the beacon right behind this little wall like thing at the end. therefore no one can see it in the direction your facing, next is the barracks (only gdi barracks not hand of nod) after you come out of the under ground tunnel go left till you get to the barracks and place the beacon right inside this little bunker/hiding place in the side of it no one will even know you were there.
