im running winXP, in a 3.2 pentium, geforce 7600gt fatality, and 1 gb ram.i have the latest drivers
and direct x 9.c the august version i thnk.
the preoblem is taht im playing normally, with my lag and that stuff, at 60 fps but then it turns to 2
fps, then 1 fps, and 0 fps...so i cant even move. I've only changed the nod textures and some
sounds, but it happened before with a geforce 6600. last renegade version tho, with the renguard
compatible crack
