Yo guys...

I'm having problems while playing renegade. Somehow renegade will not work properly. this is my system-configuration:

- ASUS P5P800 mobo
- PIV 3600 dual core (64bit)
- ATI Radeon 9800 PRO
    (BIOS Version 008.017D.033.00)
    (Memory size 128MB)
    (Core Clock in MHz 378 MHz)
    (Memory Clock in MHz 338 MHz)
    (Slot: AGP (bus setting AGP 8X)

- 1gig RAM
(hard disk CD-Drive & sound cart etc. don't matter)

This is software configuration (drivers etc)

- Direct X 9.0c
- ATI Catalyst control center v 1.2.2243.38605
    (Driver packaging version 8.342-070202a1-041238C-ATI)
    (Catalyst version 07.2)
    (2D driver version 6.14.10.6666)
    (Direct3D Version 6.14.10.0471)
    (OpenGL Version 6.14.10.6347)
    (AIW/VIVO WDM (SP) Driver Version 6.14.10.6238)
- Windows XP Professional SP2 86x (32bit version)

Problem:

- Low FPS (about 25 at start map... then when fps drops 2 or 4)
- Weird block which comes through renegade in fullscreenmode, is black or showing the background in a very low FPS rate.
- Renegade terminates, giving error messages after having played for some time (about 20 minutes for example.. but it can be 5 or less too)

If someone may know any solution.. please respond.. I've tried almost everything (updating drivers... renegade-config.. etc.)

Please respond!
