SolidSnake wrote on Fri, 16 March 2007 16:11 I used Speedfan and took 2 screenshots i have no idea what the info means im a little worried about what the second screenshot shows Seems worrying to me as well, especially because this is at idle. When gaming, the temp proolly still goes up.

A good start is to take the vacuum cleaner and clean out the dust. Chck if all your fans are still running.
