When it rains it pours it seems. I didnt have broad band for a year, so I finally get back on it and am playing the hell out of renegade (among other games) and what should happen but my motherboard dies. (3 capacitors went at once not a good sign) And now I'm looking for a new one, so I'm asking for suggestions on what to get. Right now ive got my eye on this one

<http://www.newegg.com/app/ViewProduct.asp?description=13-152-028>

anybody have this board or have any experience with chaintech boards? Any help would be very much appreciated.
