Anyway, unless you get the source code to these apps there's no point in doing so. Anti-cheating purposes if you would have read the topic you would no this, when I release Renhalo, I don't want anyone to cheat in it. If I make it so you can't open the files you would have to recreate the objects file you self, and that would be quite impossible. I could care less if anyone took my stuff because people will know who actually made it.

Well you're pretty screwed there, since anyone can get into any file related to Ren and use it for their own purposes.
