Subject: Servers won't recognize my renguard.

First, thank you for making RG finally work with windows 2000. I can't count the number of times that I've been told I'm cheating, and just using my different OS as some sort of excuse.

Renguard's running right now, but no server ingame can seem to recognize that it's running. Do I have to download the core patch for servers to recognize it, for some reason?
