---

i keep having problems with the new rg version

i start it

it updates my game, game2

update complete restart rene

i restart it and it updates my game, etc again

very strange

anyway, after like updating it 100 times i can finally play without trouble with rg

after an hour or so my rg crashed and i try to restart

it updates my game and game2 again

and again

and again

every time i want to play i am busy for like half an hour to try and get rg running again

it's working on my nerves
