Alright to keep this simple

1. I got my new laptop
2. I installed renegade -> renguard -> corepatch
3. Xwis said my serial was invalid so I used serial changer
4. Didnt help so I tried reinstall renegade
5. Now I am in this situation. If i Install renegade without anything els I can play normal. If I install renguard with renegade I cant get online because I get this error from xwis "invalid serial try reinstall"

Now I think i know whats going something is messed up in my registry because I also notice renguard doesnt auto install corepatch. But with this new installer you cant remove renguard apart from the first decade. And remove first decade doesnt remove renguard register files?

Iam stuck in an endless circuit , anybody got solution?
