Im stuck, ive got the same problem, what you just written will fix it for me 80% im sure can you explain in detail what to do please? Because none of that makes sence

"There seem to be some issues with the TFD serial fix. I'll try to get them fixed ASAP.

In the mean time, you can delete woldata.key from your rene dir and change the registry entry: HKeyLocalMachine\Software\Westwood\Renegade\Serial using regedit, to a numbers only versionof your serial(so just remove the (-) signs and type it in there) that "should" work."

(wheres the registry entry? etc.)

...I still get it even its been updated...

...I went to renguard.com still dont do...
