I had same problem, just do this.

Start a new mod file in Commando, finish your map settings and save your file. Open up windows explorer and find that new folder, delete all the folders in it except Scripts, Levels, and EditorCache. Then go back to commando, and go file> export and type in "your map.mix" (write in in the quotes"" also)

then continue, should be it.

If you still have problems, I have another solution.
