Subject: Free Targetting Problem - Won't hold in mode

I just reinstalled the game and started playing it after a VERY long time. The only problem is free targetting won't "hold"

I set the free targeting button (so your cammera follows your mouse) to the button /. The only problem is that every time I press any of the arrow keys to drive anywhere my screen drops out of free targetting mode. This is very frustrating because even if I try to turn my tank a little bit or move forward a bit my turret and view go back to straight forward. Not too much fun.

Any idea's? Thats the only keystroke I've changed btw. This is a fresh renegade install with the recent patch on it from westwood. No new scripts.dll yet.
