mrzapped wrote on Sat, 19 May 2007 19:39The RG network seems to be quite unstable at the moment, and both clients and servers are constantly being disconnected. It's just a matter of waiting for v00d00 to finish the new version...

Both servers here havent had one d/c yet, so that disconnect your talking about hasnt happened here to my servers or pc, so i doubt it has anything to do with v00d00 finishing it, but a hint : look into the problem deeper and you will see whats really happening.

As a matter of fact i havent had a d/c on any machine for days.

What do you not understand?

I specifically asked for a YES or NO reply and not a discussion. One word would suffice.

As a hint, why do you not say exactly what you are refering to? Do feel free are you to too chickenshit scared? cluck! cluck! cluck!

Why do you have a major contradiction in your statement? You say "Both servers here havent had one d/c yet" and then "I havent had a d/c on any machine for days."

What you really meant to say was YES (all one word) I have been disconnected? Afterall, not having one in days means that you have suffered like some of us.
