Lmao you know nothing, I just told you, you cant do it with one package, THE PEOPLE CRASH.
Mine is completly sever side... They dont have to download ANYTHING. Its been tested with 2
people, They downloaded nothing. Basically its a hack for the server giving you an obby gun, Yes
it will give you the 0 bug if you put it in wrong.

If you knew something, you would know that Reaver11 does know more than you on the subject
and you don't know anything.

You can change ammo, clip sizes, damage, spawners, PTs, sounds, radio commands and more,
server side. Stop bitching to all the people just trying to help you.

Do you mean client side, because server side you better be able to do these things, or else you
are doing something seriously wrong.
