Alright I got 10 bucks that you all have linksys routers and get cut off between 10-20 minutes. So first off, as already mentioned update your router's firmwire. Second for linksys routers go to this site http://192.168.1.1 and the password is admin, unless you changed it. Then go to advanced and find DMZ host or anything with DMZ. Set it to 100 or 101. This has always worked for me and my friends and got rid of that disconnecting crap. Let me know if you have any problems
