ok ill try and no i was not using notepad i was using c++ software the guy gave me the link to

so i download a software called visualstudio.net 2003

or visual studio 2005?

the one i using now is Visual C++ 2005 Express edition

"(Also, I am assuming you have put bhs.dll and other files into your servers directory, and not just put the entire folder called "server files" in there?)"

huh? i got the bhs.dll file in there

i just download the brenbot pack that came with corepatch1 and 2 along with some plugins like rank i choose cp2 instead of scrips 2.9.2 so ya
