scripts 2.9.2 (actually that is out dated, you want 3.2.3) should only be used on your client install of renegade. It can be used for the server, but SSAOW is what you actually want in your servers fds directory.

It might be confusing for you, because they are both called scripts.dll. But the scripts.dll from the ssaow you downloaded goes into your fds directory, the 2.9.2 goes on your client.

SSAOW 1.5 opens with visualstudio.net2003, this is what you need to use.
