Hey guys, not sure if this thread would belong in the the general chat or mod chat but whatever.

Is there anyone here that knows anything about .bins? I know they are disk images like iso but I need to extract a certian one.

What i'm trying to do.

My goal is to fully translate monster hunter portable for the psp. I'm pretty sure i'm looking for some sort of string file and i'm pretty sure it's contained in the game's munge file. The munge file in question is called DATA.BIN. I have tried all the programs at my disposal but none have been able to extract it. I have used magicISO and WINISO with no avail. The people that i have been talking to tell me that i would have to make myself a game specific extractor.

The Extractor.

For those of you who aren't as well versed in the psp. The storage format is called a UMD disk (universal media disk). I have already extracted the UMD's contense and within said contense is the DATA.BIN. Any ideas where to start with this thing?

Jamie
