---

www.filext.com

Specific: <http://filext.com/file-extension/bin>

A file that contains other files, but is not a folder. Filext lists links to open these types of files although it is mainly used by the program in question, and can only be used by the program in question. All binary files are encoded different ways and unless you know how to decode them there's a very slim chance that you'd open it.
