Alexraptor wrote on Wed, 13 June 2007 09:51 There seems to be a new bug thats cropped up with this, after installing the 3.4 scripts, i end up randomly starting to get wierd lag, chopyness that just gets worse until the whole game freezes completely and i have to manually reboot the system.

Actually, this is happening to me as well...thought it was freezing because of all the browser windows when I tested the fog, but it happens every time.
