its normal for me but yet i se people lagging badly!

so i tryed this someone told me hit F8 and type sbbo 6000000
and tryed that nothing
then i tryed '
F8 set_budget ***** (like what they use for lan exploit) and type 56000 yet nothing any ideas? and no its not the server
You should just leave your bandwith to "LAN/T1" in my information.

Try typing "nur 30" in F8 while in-game. This could be a reason it seems to lag.

Also is your fps / sfps stable? A high, unstable fps/sfps is worse than a low, stable fps/sfps.

um kinda jumpy at soem points

the set budget in
wat should that be 5600? or 200000?

and someone said do thsi command

sbbo 150500 whats that it kind ahelps?
