I like the font smoothing.
It seems really slow to me, for some reason (a lot slower than Firefox anyway):- It always seems to get stuck for ages with the progress bar just after the second w in www.
The UI isn't exactly terrible, but I definitely prefer the iTunes one.
(Fits in well with a MacOS WindowBlinds theme though!)
If anyone has noticed, the text input boxes have a handy handle in the bottom-right corner where you can make them larger. It messes up some websites though.

I think I'll stick with Safari on MacOS for now.
