Ok can any one please make a script that basicly changes controls for vechs: The w or up key makes you speed up. Likewise the s or down key makes you slow down. (two speeds, stop and go forward, just forward. ) And have the vech follow the mouse pointer.

In other words: I would like a banshee-style control from halo to make non-vtol aircraft more non-vtol aircraft like.

Many thanks if this script is made, if possible.
