mmhmm.

40 player public server is up and running now. Hostname: SpookySrv.

Differs from other large servers in that it has no modifications such as donate, starting credits, weapon drops, altered weaponry of any kind etc.

Forums are at <http://spooky-renegade.com> though I haven't gotten around to organising them yet.

I also haven't put too much thought into moderators, so there are vacancies.

Once the public-server ladder is done, SpookySrv will presumably be a worthy place for it players to compete on the ladder, assuming it has a reasonable player base by then. Of course, it doesn't use an a00 name so no promises.
