So it goes like this.

One day me and our server operator were talking, he had finished adding a new scripts.dll mod to the server and ready to turn it on, no go, our hostname "a0000000u" would not work. So we remade a new name and it worked, and it so happened, after that I saw a server called Wittebolx marathon, i looked at the hostname and what do you know....our clan's hostname was stolen by him, we kept thinking serials were the issue of our server, but using several different serials didnt help, because the hostname was already logged in and being used to host Wittebolx. I have talked to a few people, but they say they have no relation to him and cannot help me, we have proof that it is our hostname as many of our members also remember it beig a, seven zero's and a u at the end....so beware, a00 names are rare now so protect yours! (we have no clue how he got it's password, but we do have some ideas)

EDIT: We are pretty sure how he did it, and we have proof that he played in our server too:

-[AoB]Chopper- [NR] wittebolx last played in this server 2 Week(s), 5 Day(s), 2 Hour(s), 35 Minutes(s), 7 Seconds(s) Ago.

THus being in the server with some hack or ability, he could have accessed our password to the hostname and used it for his own marathon server.
