I am using my valid serial from the back of the CD case, yet it still doesnt work, back then it worked up until i upgraded to ssgm beta 2.0....now recentl i upgraded again to the full release of ssgm 2.0.1 and same thing happens, I think it may be a ssgm file, not sure, I tried looking for ssaow to switch back to see if that would work, but I cant find ssaow anymore since black-cell only host ssgm.
