Well, I'm on my 16" miscolored monitor that I usually use as a secondary because myu 19" primary quit on me. So, here is my lower res than usual desktop:

It's just the earth texture that comes with 3ds Max 9.

BTW: I posted a desktop thread less than 8 months ago, and no-one really cared for it at the time.

BTW2: Sir Phoenixx, can I have the image you are using as a background?
