Hey. As some of you might of noticed I have NOT been able to get brenbot 1.5 to work as much as I've tried and I would like to try to get 1.41 working. However, I cannot get the archive for the download on the brenbot website to work and I don't really want the server side core patch either. Is their a download for a zip/rar that I can extract and then upload to my server for JUST the required files for brenbot? Or can someone possibly hook me up with that:/?

Thanks in advance for any possible help.
