danpaul88 wrote on Fri, 13 July 2007 13:59 BRenBot does not support ASE, only the default GSA client. I don't have the protocol for ASE and therefore cannot support it.

I read in README - BRenBot 1.50.txt the following:

BRenBot 1.50 includes a GSA protocol system which improves on that in the current version of WOLSpy.

I don't see this as an improvement not being able to generate ase queries whereas wolspy 1.22 could. Moreover the normal RenegadeFDs is able to generate ase queries but not in wol mode.

For the ase protocol:

<http://www.int64.org/docs/gamestat-protocols/ase.html>
