danpaul88 wrote on Sat, 14 July 2007 02:26 You should play on a server with an updated copy of BRenBot or NightRegulator then, as they no longer kick you from the game when RenGuard disconnects. Obviously whichever server you are playing in is using an out of date bot.

^^ No, I was playing in TsuGaming AOW. That has the most updated NightRegulator out there. BRenBoT is a tool half the time, all the other bots are the easiest to setup, and brenbot makes people think about ok, now i have to go to server.ini check the ports blah blah blah...

As how CS & NR they both have easysetup's, I dont know why people torment those 2 bots(CS & NR) there the best bots out there.

RenGuard is dumb in my opinion, it kicked me like 3times from the server.
