If YOU cannot be bothered to change YOUR server, to fix YOUR problem, I hold little help for you.

Look, we're lucky we have any form of anti-cheat. Actually, Renguard is "A complex client/server application" and BOTH sides need to be up to date.

BHS had a stable release and it just ran.

Somewhere along the line they went forward with some change that has rendered this program useless.

I posted before that BHS needs to revert back to a stable release.

This one here is junk plain and simple but no one seems to be concerned about stability of the client and are more concerned about fixing the stupid bot's on the server side.

THE PREVIOUS VERSION HAS A MULTITUDE OF PUBLICALLY AVAILABLE, FUNCTIONAL, BARELY DETECTABLE BYPASSES. USING IT IS NOT AN OPTION, IT WOULD RENDER RENGUARD USELESS.

Do I have to type that in a bigger font?
