---

For everyone who use WOLProxy on server PC:

Edit wolproxy.mrc with notepad.

Find this line:

```
sockopen WOL_r $+ $mid($sockname,6) 195.13.63.165
```

and instead 195.13.63.165 enter this IP 212.162.52.4, save and restart WOLProxy.

This was caused because today XWIS was moved to another server with better hw and connection.
