Can you explain to me why he admits to using \*cheat\*? and Using other CLIENT SIDE cheats? Or unless you'd like to show me how \*cheat\* works server side..

Them "cheats" he said can only be done if HE is the host, Don't you understand?

Is it that hard? Really.., Is it?

If your not going to help him, Get out of this topic, Please.

@Sn1per: any 0669(few more numbers here) gets past the installer, replace the fake serial in server.ini with your Renegade serial and it should work.

I repeat, "Wow, some people are actually mentally handicaped.". I used \*cheat\* and by that I meant, rg\*h. So exlpain to me how thats server side, thanks.

So you admit to using RH\*H? Lol..

No, really, read the text on the Screenshot you posted, Most are all handled SERVER SIDE, or when you host the server.

Please note I used caps on SERVER SIDE so I can make a point.

"Spawning stuff in front of you is possible client side on someone else's server." Ya, I'm pretty sure that only works when you host a server, lol.

I think I'm correct to say "Ignorance is bliss" for you, Troop.
