CNCWarpathI didnt add side ramps due to the time i was just playing around but the polys are low and shouldnt cause a problem in Renegade.

You can resize it depending on its use, for isntance u wont need something bigger than a man sized ramp to walk up to get in the aircraft.

For instance if u used it as a repair pad you can easily resize it so the ramp is bigger.

You can easily convert it to ediable mesh and then pull the sides down to be one continuous circular ramp. but it's your model. enjoy. and thanks for sharing.
