Chuck Norris wrote on Sat, 04 August 2007 07:58*shrugs* I followed this skin guide.

http://www.cncden.com/renegade_skin_tut.shtml

It says to disable alpha. What exactly will that change? I've edited a few skins saving them that way and saw no noticeable difference. It's worked for every skin without problem, and when one did go black, I used DXT5 and it worked (I never mentioned to try DXT5 in this case because I thought the SBH wasn't one of the special ones that needed it, since the stank doesn't).

Jesus Christ, Click anywhere on that site and a pop up appears!

I'm not sure what it would change myself..
