Just installed renegade onto my new vista   laptop. I go to execute the program and I get
"Renegade has stopped working: A problem caused the program to stop working correctly.
Windows will close the program and notify you if a solution is available."
So I'm looking around here on the forums for some help and see that others have had the same
problem, so i heeded ya'lls advice.
I went into properties and changed all the setting to admin and windows xp. nothing. I went as far
as to set admin privlages to my westwood folder and all of the subfolders and still nothing.
What am I i missing here? Does anyone have anymore advice into what the problem is and how
to fix it?
