Hello everyone!

I've been googling about this for a while but I just can't find anything that helps. This may sound a crazy question, but asking costs nothing.

Everyone remembers the creepy but awesome voice of our favorite AI, the Computer Assisted Biologically Augmented Lifeform right? For a project I'm planning I'd like to create some clips of Cabal saying certain things but... how the hell can you mimick his voice? It sounds mechanical... anyone knows if there is some kind of tool that allow me to create clips sounding like Cabal? Thanks in advance for any help
