Here, just in case I am not being clear enough with my problem, here are some visuals!
Buildings in gmax:

Notice he new prefixes.

EDIT: Damn, it is too small to see <_<

Well anyway, it shows the prefixes as "mgagw" and "mgagr"

Level Edit presets 1:

Presets 2:

See how they match up with the prefixes that I made in gmax.

Video of what happens in Renegade. (Sorry the video desynced, the video sped up, but the audio remained the same.. don't know why)

Notice how I can target the outside of the AGTs but not the insides, or the MCT. (Also, I just realized there wasn't a PT in that spot.. lol)
