I would like to introduce the next-generation of IP connection programs for cnc Renegade. Renegade Launcher is similar to RenegadeIP and connects to any Renegade (or Renegade mod) server, but has several more features.

1. Renegade Launcher supports multiple user profiles, so you can save user information for several people, or alternatively, for Renegade and any mods you may have (see screenshot).
2. Renegade Launcher saves server IP addresses and ports in individual files, making it easier than ever to share server addresses between friends
3. For those of you who frequently start several other programs with Renegade (mIRC, Teamspeak, etc.), Renegade Launcher can launch up to 100 additional programs with Renegade when you click the launch button. Simply enter each program's name and find the executable on the hard drive, and Renegade Launcher will do the rest. Renegade Launcher saves the program list with each profile so that your programs will automatically be launched once you configure it initially.

The Renegade Launcher can be downloaded from [game-maps.net](http://www.game-maps.net) at <http://www.game-maps.net/index.php?action=file&id=892>

Renegade Launcher requires the Microsoft .NET framework 2.0.

[Download it Here](#) for computers with x86 architecture (most computers)

[Download it Here](#) for x64 machines.

Please send any comments or concerns to me through these forums, or email me at slavik262@gmail.com

Thank you.
