I hope the game isnt really all that high def, I want it to run off my old computer for multiplayer and all, If not, then Maybe I will just go buy that cheap 350 dollar PC, the one at office depot..

amd x2 4200+
2gb ddr2 ram
350gig HDD
nvidia 6150

I'd just buy a cheap graphics card for 100-150 dollars, stick it in, and make the thing a mini gamer.
