trooprm02 wrote on Sat, 22 September 2007 21:47K, but how can you set your refresh rate lower than 60? Can't be done with most (if any) decent screens.

My question exactly.. Game performance would actually run smoother at 30 FPS then 60-100, unless its VERY stable at 60-100, but it jumps to much and it gets annoying..

EDIT: I remember I was playing a GTA:VC game not to long ago, there was a option if you wanted to lock your fps (it would be 30 max) and if you set it off, it would go crazy high.. 500FPS, smooth as fuck, even when it jumped, so I don't know..
