WOL hasn't been workin for me for about 3 months, so I finally have decided to re-install Renegade. I copied all the important .pkgs and script from my data folder, and stored them away in another one. Now when ever I'm installing it during the always.dat coping, the setup crashes, and a I get aRenegade Setup Error. "Cabinent File System Error 4". This happened twice so far, last time it ocured earlier in the installation though. This really sucks, it's holding up my SS progress.
